AI Job Lead Generation Agent

One-pager · technical specification summary · UK (all formats) + Ukraine (remote only)

21 October 2026
Full spec: TS v0.2

Primary KPI: employer-initiated meetings per week · the candidate only spends time on employers who already want to talk

What it is

A multi-agent system that finds vacancies every day, tailors the candidate's CV to each one and applies on her behalf. It is a conversion funnel, not a mass mailer: **vacancies found → relevant → sent → replies → meetings**. Precision at matching protects her Gmail's sending reputation and her standing with recruiters.

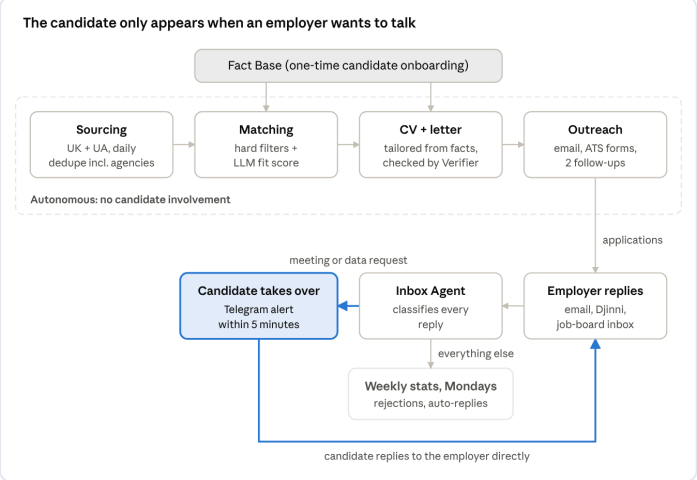

Zero-touch principle

After one-time onboarding the candidate does nothing until an employer responds with intent. This rule overrides every other requirement.

Stage	Candidate involved?
Onboarding: facts, constraints, form answers, authorisation	Yes, once
Search, matching, CV tailoring, applications, ATS forms, follow-ups	No
Rejections, acknowledgements, auto-replies	No live alerts — summarised in weekly stats every Monday morning
Employer initiates a meeting (interview, call, scheduling link)	**Yes — Telegram alert ≤ 5 min, candidate takes over**
Employer requests additional data (documents, salary, references, test task)	**Yes — Telegram alert ≤ 5 min, candidate takes over**
Errors, quality audit, reports	No — go to the Operator

At handoff she gets the full context (employer message, vacancy, CV and letter sent, reply link) and the thread is frozen for automation. If the classifier is unsure, it hands off anyway. Recruiter calls to her phone are logged by her in the bot in one step.

How it works

Eight agents run daily under an orchestrator; Telegram is the only candidate interface. Technical alerts go to a separate Operator chat.

Markets

	United Kingdom (primary)	Ukraine (secondary)
Format	Onsite, hybrid, remote	Remote only
Sources	Reed, Adzuna, Totaljobs, CV-Library, Indeed UK, LinkedIn (3rd-party data), employer ATS boards	Djinni, DOU, Work.ua, Robota.ua, employer ATS boards
Filters	Commute radius, salary floor (right to work held, stated in CV)	Fully remote, time zone, salary floor
CV	UK CV, ≤ 2 pages, British English	UA or EN, matching the vacancy
Specifics	Cross-agency dedup; UK GDPR + PECR opt-out	Djinni inbox handled like email

Tech and guardrails

- **Stack:** Python + LangGraph (or n8n), PostgreSQL + pgvector, Redis, Playwright, Telegram Bot API, Gmail API with push.
- **AI providers:** Gemini Flash for parsing and classification; Gemini Pro or Claude for scoring and writing; the Verifier always uses a different provider.
- **Passing employer AI screening:** every CV runs through an ATS simulation before sending — titles, dates, sections parse correctly; must-have skills and keywords covered. Below threshold → reworked or dropped.
- **Truthful CVs only:** every claim traces to a fact ID; no hidden text, keyword stuffing or prompt injection.
- **Deliverability:** sent from her own Gmail, ramp-up to ~20–30 emails/day, auto-pause if bounces > 3%.
- **Safe sourcing:** no scraping from her LinkedIn; CAPTCHA forms skipped, never bypassed.

KPIs

Metric	Target
Employer-initiated meetings / week (primary)	Baseline after 4 weeks
AI / ATS screening pass: not auto-rejected within 48 h	≥ 85%
Pre-send ATS check: keyword coverage; clean parse	≥ 80%; 100%
Meetings / applications sent	≥ 3–5%
Reply rate	≥ 10%
Handoff latency (p95)	≤ 5 min
Missed handoffs; extra messages to candidate	0

Decisions

DECIDED Full UK right to work · sends from her own Gmail · phone on CV, calls logged in bot
